Extended Range Prediction for Bhutan

Background

Extended Range Prediction (ERP) for Bhutan is prepared with the support from the Indian Meteorological Department (IMD), Government of India. The model used for the system is CFSv2 coupled model (Atmospheric and Ocean model) which runs once every week (Wednesday), with the 16 Ensemble Members at the horizontal resolution of around 25 km, and the products are made available the next day (Thursday). Therefore, the ERP products for Bhutan will be generated every Friday. ERP for Bhutan is carried out for two climate variables, rainfall and temperature.

Generally, the forecast output is produced on a weekly basis for a period of a month for both the variables. The current products available from NCHM are on pilot basis which needs further studies and validation with the ground observations until the product is fully operationalized.

Observed weather over last week

Most of the stations across the country showed a constant maximum and minimum temperature throughout the week. No rain was observed over the most part of the country for the last week except for the isolated rain in the northern, central and southern parts in the middle of the week. The table below displays observed real time rain and temperature data from regional meteorological stations over the last week.

Station	Parameter	2 Aug	3 Aug	4 Aug	5 Aug	6 Aug	7 Aug	8 Aug
Babesa	Tmax (°C)	25.0	22.0	26.0	26.5	23.0	25.0	24.5
	Tmin (°C)	16.5	14.0	15.0	16.5	15.5	15.0	15.5
	Rain (mm)	4.7	2.2	0.2	13.6	17.3	7.6	0.0
Dagana	Tmax (°C)	23.0	22.5	26.5	24.5	25.0	27.5	25.0
	Tmin (°C)	19.5	19.0	17.5	19.5	19.5	19.5	19.5
	Rain (mm)	32.2	14.8	0.0	12.0	16.2	16.0	11.2
Chamkhar	Tmax (°C)	21.0	22.5	24.5	24.5	23.0	25.5	22.5
	Tmin (°C)	15.0	16.0	16.5	17.0	16.5	16.5	16.5
	Rain (mm)	3.1	0.8	1.4	40.1	1.3	8.0	8.2
Deothang	Tmax (°C)	31.0	28.5	28.0	28.0	28.0	28.0	29.0
	Tmin (°C)	24.0	22.5	22.5	22.5	23.0	22.5	23.0
	Rain (mm)	0.0	0.0	25.0	16.0	0.0	12.0	36.0
Gasa	Tmax (°C)	19.0	18.5	24.0	22.0	23.0	23.5	20.0
	Tmin (°C)	12.0	12.0	11.0	13.0	12.0	13.0	13.0
	Rain (mm)	11.6	0.8	24.2	22.2	11.2	15.2	10.2

Weekly forecast for Bhutan

1. Rainfall Prediction

Week 1 (08 August - 15 August)

Above normal rainfall is expected over the country except for the southeastern area.

Week 2 (15 August - 22 August) , Week 3 (22 August - 29 August) and Week 4 (29 August - 05 September)

Below normal rainfall is expected throughout the region.

2. Maximum Temperature Prediction

Week 1 (09 August - 15 August)

Normal maximum temperature is expected throughout the region with the extreme western part experiencing below normal maximum temperature.

Week 2 (16 August - 22 August)

Normal maximum temperature is expected throughout the region except for the slightly above normal maximum temperature in the north-central part.

Week 3 (23 August - 29 August) and Week 4 (30 August - 05 September)

Above normal maximum temperature is expected throughout the region.

3. Minimum Temperature Prediction

Week 1 (09 August - 15 August) ,Week 2 (16 August - 22 August) and
Normal maximum temperature is expected throughout the region.

Week 3 (23 August - 29 August) and Week 4 (30 August - 05 September)
Normal maximum temperature is expected throughout the region except for southern parts experiencing above normal minimum temperatures.

THIMPHU: BHUTAN

"Centre of Excellence in Hydrology, Meteorology and Cryosphere Science and Services"

- The rainfall is likely to be above normal for the first week and then gradually be below normal for the rest of the month..
- The maximum temperature is likely to be normal for the first two weeks and above normal for the last two weeks.
- The minimum temperature is likely to be normal for the whole month.

Classification of rainfall for 24 Hours

No rainfall	0.0 mm
Very light rainfall	0.1 to 0.9 mm
Light rainfall	1.0 to 10.0 mm
Moderate rainfall	11.0 to 30.0 mm
Heavy rainfall	31.0 to 70.0 mm
Very heavy rainfall	71.0 to 150.0 mm
Extremely heavy rainfall	Equal or more than 151.0 mm
