Press Release for 2017 Summer Monsoon Outlook

Forecasts and Cross-Validated Hindcasts

MMEM D&A Perc. Anom.(%) Jun to Sep 2017 Issued Apr

Normal to slightly below normal rainfall is most likely during the June to September (monsoon) 2017 over Bhutan.

This is based on a consensus from analysis and predictions carried out by National Center for Hydrology and Meteorology (NCHM), products available from the South Asian Seasonal Climate Outlook Forum (SASCOF-10) and other leading global centers that produce seasonal climate predictions.
