## Weather Observation and Analysis

**1. Meteorological observing stations** Yesterday, stations across the country observed mostly cloudy to cloudy weather with light rainfall. The highest rainfall recorded was 4.1mm at Phuntsholing meteorological station under Chukha Dzongkhag during the past 24 hours.  
*Note: A rainfall accumulation of 4.1mm is classified as light precipitation for Phuntsholing station.*

**26th February - 04th March 2026:** No severe weather warning.

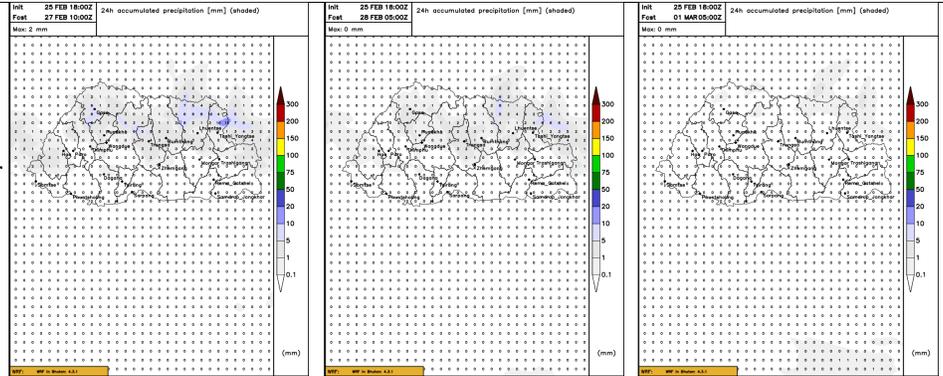

**Meteorological Analysis**

- ❖ The cyclonic circulation over southeast Bay of Bengal extending upto 1.5 km above mean sea level persists.
- ❖ The upper air cyclonic circulation over south Assam at 1.5 km above mean sea level persists.
- ❖ The upper air cyclonic circulation over northeast Arabian sea off Gujarat coast between 1.5 & 3.1 km above mean sea level persists.
- ❖ Subtropical westerly Jet Stream with core winds of the order of 75 knots at 12.6 km above mean sea level prevails over North India.
- ❖ The Western Disturbance as a trough in middle tropospheric westerlies with its axis at 5.8 km above mean sea level now runs roughly along Long. 60°E to the north of Lat. 35°N.
- ❖ A fresh Western Disturbance is likely to affect Western Himalayan region from 02nd March, 2026.

**4. Indian Meteorological Department (IMD)**

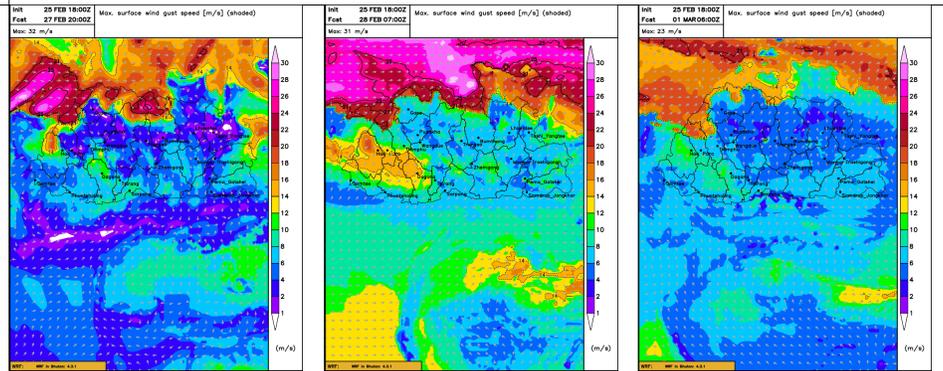

## Weather Research and Forecasting Model

Precipitation: Mostly cloudy to cloudy weather with light rain is expected over the country with light snowfall over northern and high-altitude areas/passes of the country during the next 3 days.

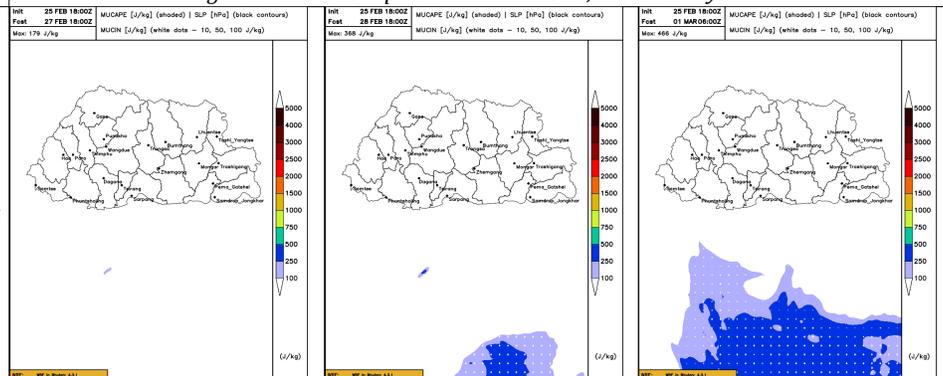

*Figure: 24-hour total precipitation dated at 18:00 UTC, 25 February 2026*

Wind :Wind gusts likely over isolated places of the country during the next 3 days.

*Figure: Wind Gust updated at 18:00 UTC, 25 February 2026*

Thunderstorms: No severe thunderstorms over the country during the next 3 days.
